

## **Horizon 2020**

### **Societal Challenge: Improving the air quality and reducing the carbon footprint of European cities**

#### **Project: 690105 – ICARUS**

Full project title:

**Integrated Climate forcing and Air pollution Reduction in Urban Systems**

#### **MS7: completion of future activity-emission factor matrices for the participating cities**

**WP 2: Integrated emission modelling at the regional and urban scales**

Lead beneficiary: USTUTT

## Future activity-emission factor matrices for the participating cities

Future activity emission factor matrices for the participating cities are present as excel files and access databases according to the respective requirements in the ICARUS cities. The database structures are also described in detail in the Deliverable 2.2. The screenshot below shows the common emission database that is derived from the individual activity-emission factor databases. It therefore documents that the milestone has been fulfilled. The city emissions for 2015, 2020 and 2030 are reported in the annexed excel file.
